

Crowe application
modernization services

crowe.com

Cloud migration is a given. More importantly, have you modernized?

You have moved to the cloud and want to capitalize on your investment. But you are unsure how to leverage all the cloud has to offer.

Application modernization is the answer. Crowe can help you make cloud migration a smart business decision by using what is already in your inventory to make the cloud work more effectively for you through technology transformation.

Application modernization brings new abilities

What defines application modernization? Application modernization entails creating new business assets from existing applications. It delivers more – beyond a move to the cloud.

Companies who do not modernize applications are missing an opportunity to differentiate themselves from their competition. Once an organization is in a modern IT environment, it should be experiencing new benefits from the cloud.

Cloud benefits to capture include cost savings such as reduced overhead and IT staff time reductions.

Once servers are transitioned into platforms as a service or serverless architecture, companies can down- or upsize an application based on demand. This can result in significant cost savings as the power is turned down and certain activities are automatically performed by the platform, including:

- Maintenance and patching
- Scaling and high availability
- Disaster recovery
- Security and threat detection

Application modernization frees your IT resources

Crowe optimizes application stability for uptime, backups, performance, and digital transformation. We help free up IT resources to improve business performance and bottom lines. We think long term to help you maintain benefits and continue to control ongoing costs and minimize cloud spending.

Gain a competitive advantage

Crowe application modernization services are different because we have a long-term relationship approach to technology transformation. Where other firms only drop companies in the cloud and check the box on cloud migration,

Crowe focuses on immediate and long-term benefits, including:

- Focusing on cost-saving opportunities
- Bringing out the value of digital transformation
- Elevating an organization's IT to a higher level of business value
- Offering deep technical and industry expertise through the entire application modernization life cycle to help:
 - Plan your migration
 - Execute it
 - Provide ongoing support and managed services after cloud migration to minimize inefficient knowledge transfer brought about by ramping up numerous vendors
- Delivering expertise with Microsoft™ licensing – 400 dedicated Crowe technology professionals
